NEWFAB has been serving OEM manufacturers and industrial end users for 30 years. We have the experience and ability to respond to your needs, on your timetable. Partnering with NEWFAB keeps your focus on the future.

NEWFAB manufactures products to perform in some of the most demanding environments on earth. You can trust NEWFAB to bring your products to life.

When quality and performance matter... each and every day.

*"We never settle for 'how it's always been done'. Each project starts with a clean slate. If there's a better way to get something done, we'll find it."*

Leon White, Vice President, NEWFAB, INC.

**NEWFAB**

## Experience and Innovation

We understand that choosing the right contract manufacturing partner is an important step for any company. It can often determine the success or failure of a specific product or the entire operation.

We take this responsibility very seriously, and we have built our process around it.

## Communication

Our account managers are always available to answer questions and keep customers informed every step of the way. They also know that sometimes talking directly to the welder or machinist on the floor is the most efficient way to communicate.

## Teamwork

Many of our employees have been with the company for 10 years or more. This well-seasoned team of project managers, welders, machinists, and assemblers works together to create the most effective techniques and processes that produce the highest quality products.

## Always Built Better

In any manufacturing environment, being able to consistently and flawlessly 'build to spec' is important. Exceeding expectations, NEWFAB's experienced manufacturing team is also expected to offer material and design alternatives when a discrepancy, omission, or potential design flaw is identified.

## Experience and Dedication

Our well-established processes ensure that the highest quality standards are maintained throughout the entire project. However, we never stop looking for areas where we can improve.
